Plan

1. Project Description
2. A General Use Case
3. Users and Entities
4. Workflows
5. Front-end
6. Backend
7. Requirements
8. Reporting

1. Project Description

HOLIKEY Project is a multivendor platform that relates vehicle rental agencies with their direct customers.

The platform allows the users to search and book a vehicle.

The concerned agencies are located in Morocco and a client can be located in any country in the world.

The platform offers an online payment : 20% (at least) or 100% (optional)

Possible pickup locations of a vehicle

- the agency address
- the airports
- train stations
- bus stations
- city centers.

Each agency defines a set of pickup locations among the possible pickup locations.

2. A General Use Case

Mr. Faysal Cherradi needs a car in Beni Mellal train station from 12.06 to 20.06. He opened the home page of Holikey platform, searched the car. The result shows 10 vehicules with their prices and main features.

Mr. Cherradi filtered the search results to show only small cars and then, sorted them by the cheapest. He selected the car *Smart* offered by the agency *MoroccoRent*. He decided to book this car.

He added an extra booster seat for his 5 years old son.

In the next step, he entered his personal data and then chose to pay with his VISA card. For that, he entered the card codes and pay all the total amount of the rental. He received a confirmation mail with the possibility to cancel his reservation.

Agency got notification mail for a new pending reservation. The admin of the agency checks the availability then confirmed the reservation.

After the confirmation from the agency the required amount to pay is booked from the VISA Card of the customer. Mr. Cherradi received the final confirmation per mail. He printed the rental document and picked up the car on the start date.

3. Users and Entities

Three users of the platform

- **Administrator:** accept/reject an agency
- **Agency:** publishes vehicles, confirm/reject a reservation
- **Client:** searches and rents a vehicle

Business Entities

- **Agency**
- **Client**
- **Vehicle:** several types (small car, transporter, etc)
- **Reservation:** performed by the client. A reservation can be *confirmed* or *rejected* by the concerned agency or canceled by the client before the deadline.

Non-business Entities

- **Address :** street, number, postal code, city, state and country.
- **Price :**

$$\text{reservation price} = \text{price per day} * \text{duration}$$

$$+$$

$$\text{price of extra added services (insurance, seats, navigation system and second driver)}$$

The price of a vehicle depends on the season (high or low) and the days (business days or public holidays).

Properties of Entities

| Agency | Customer | Vehicle | Reservation |
|-------------------------------|----------------|--|------------------|
| Number | Id | Id | Number* |
| Name | First name* | Vehicle number* | Date* |
| Surname | Last name* | Vehicle Type | Start date* |

| Join date (registration date) | Email* | | Customer* |

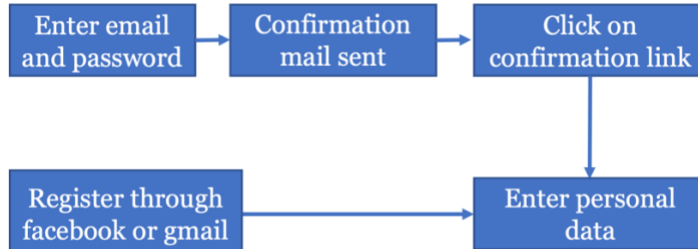

| | | | |
|--|--|--|---|
| Contact (his full name) Description Payment methods Provided seats (baby, child, booster) Navigation System Insurance* Second driver price Pickup locations Cancellation deadline Review Review comments | Driving license number* Issued date* Address | Year Energy* Gear type Doors* Seats* Air conditioning Air bags Navigation system Low price* High price* Holidays price* Description | Vehicle* Agency* Status* : pending, confirmed, canceled or completed. Payment date Paid price* Total paid* |
|--|--|--|---|

4. Workflows

Customer signup

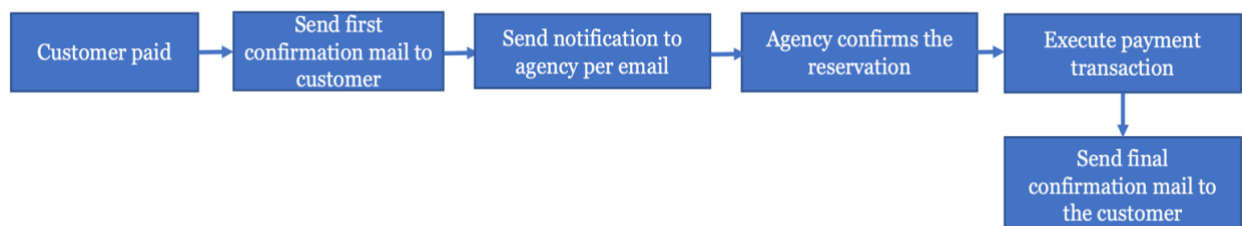

First, the user enters only the email and password. Then, a confirmation mail that contains a confirmation link is sent to the user. After clicking the link, the user is redirected to enter his personal data.

The user can also register via his existing gmail or facebook accounts.

First and final confirmations

The user confirms the payment of his reservation, then a first confirmation mail is sent to him and a notification is sent to the concerned agency. At this stage, the reservation has the status **pending**. The agency checks the availability of the vehicle and confirms the reservation. At this step, the status of the reservation is **confirmed**. The paid amount of the reservation is then taken from the user account. Finally a final confirmation mail is sent to the user.

5. Front end

Steps of booking a vehicle

1. Home page :

Three mandatory search fields.

The start date is opened directly after selecting the pickup location.

After selecting the start date, end date is automatically opened.

When the search button clicked, the results are displayed.

2. Search results :

The search result shows 10 vehicles per page.

The list of vehicles is sorted by default by the best rated. Then the the cheapest.

The user can modify his search or filter the results by several vehicle features and agency services.

3. Extras services : insurance, seats, navigation system and second driver

4. Personal data : signed in case and not signed in case

5. Payment : the client should pay either the total price or 20% of it

6. Confirmation : a first confirmation is shown with a link to immediately cancel the reservation. The user is also informed about the mail sent and the agency cancellation policy

7. First mail : contains a confirmation and a link to cancel the reservation

8. Final mail : contains all the rental infos and a link to cancel it. The amount to pay is booked at this step.
